3 January 2005

Dear Sir/Madam:

Since I discovered Ecarma ImmunElixir Plus' potential to reduce incidence dyspnea and mostly, resolution of signs and symptoms of bronchial asthma, I started to give this as a maintenance medications with this group of patients.

Initially, patients are given the usual medications for bronchial asthma and augmented with Ecarma ImmunElixir Plus and a weekly follow up consultation is followed. Most patients with augmented Ecarma ImmunElixir Plus medications have reduced breathing difficulties and frequency of asthmatic attack as compared to those without the herbal food supplement.

Once patients' breathing condition improved, I recommend tapering of anti- asthmatic medications and maintenance of Ecarma ImmunElixir Plus and noted resolution of breathing difficulties.

I highly recommend Ecarma Immun Elixir to improve health conditions of asthmatic patients.

Sincerely yours,

*Lare E. Almazan*
