To Whom It May Concern:

As a medical practitioner, one of the most commonly encountered cases in our clinic are those suffering from one form of infectious diseases. And to address these, one of the mainstay herbal products we use in the clinic for such condition is Ecarma Herbal ImmunElixir Plus.

From my experience Ecarma herbal capsules is very effective in many form of infectious diseases specifically involving bacterial, viral or even fungal infections, involving in particular respiratory and dermatological problems. I believe this may be attributed to the potent antioxidant effect and immuno regulating factors of Ecarma , where both leads to increased immune system.

So far for skin problems, even for cases of recurrent eczema or psoriasis, drying of skin lesions were immediately noted so as immediate relief of respiratory symptoms within just one week of medication, given at 1 capsule 3x a day up to 2 capsule 3 x a day after meals for extreme cases.

For any other details you may require our medical records will always be open for your reference which will help to attest for it's effectivity against selected infectious diseases.

Sincerely,

Sonny A. Vloria, MD
